

CS290 Website Project Proposal

Website Theme

The website I will be creating for this project will be a personal portfolio website that I can begin now and continue to build on as I grow as a developer in skills and project experience. The website will have a main landing page, and the three additional pages will be an “About” page, a “Project” page, and a “Contact” page. The “About” page will have a Bio about myself, and some descriptors about the skills that I currently possess. The “Project” page will have details on the projects that I have completed and am also currently working on. This page will be updated in the future with new projects and status updates. Finally, the “Contact” page will have information about how to get in touch with me, links to my social media accounts, and an option to download a resume` that I place there.

The various page features and layouts are described below. All pages will have a navigation menu at the top-right of the page, and a personal logo on the top-left. They will each also have a main title that is top center in the page content before any additional content.

Landing Page:

- Main title.
- Website descriptor.
- Photo carousel animation with navigation buttons.

About Page

- About Title.
- Personal Bio.
- Unordered List of Skills.
- Bio Picture.

Project Page

- Project Title.
- A sidebar scroll-box with current updates to projects.
- A button for a form to ask a question or request information about a project.
- Current specs, pictures, and information about my projects.

Contact Page

- Contact Title.
- Description about contacting me.
- Links to my social media accounts.
- Button to download my resume`.
